

Economical Solution

to VDI tool presetting at every cell...

The Hardinge VDI Tool Presetter System is designed to reduce machine downtime during job setup on horizontal and vertical turning lathes. Use this system to measure tool position height and length that you can input into your control.

Minimize downtime during setup by presetting tools outside of the machine during cycling. This onsite gaging system eliminates time spent travelling to the inspection room at the other end of the shop! The small 12" x 18" footprint makes this a portable unit that could be shared by operators, or ideal for every machine, with its economical price.

System includes:

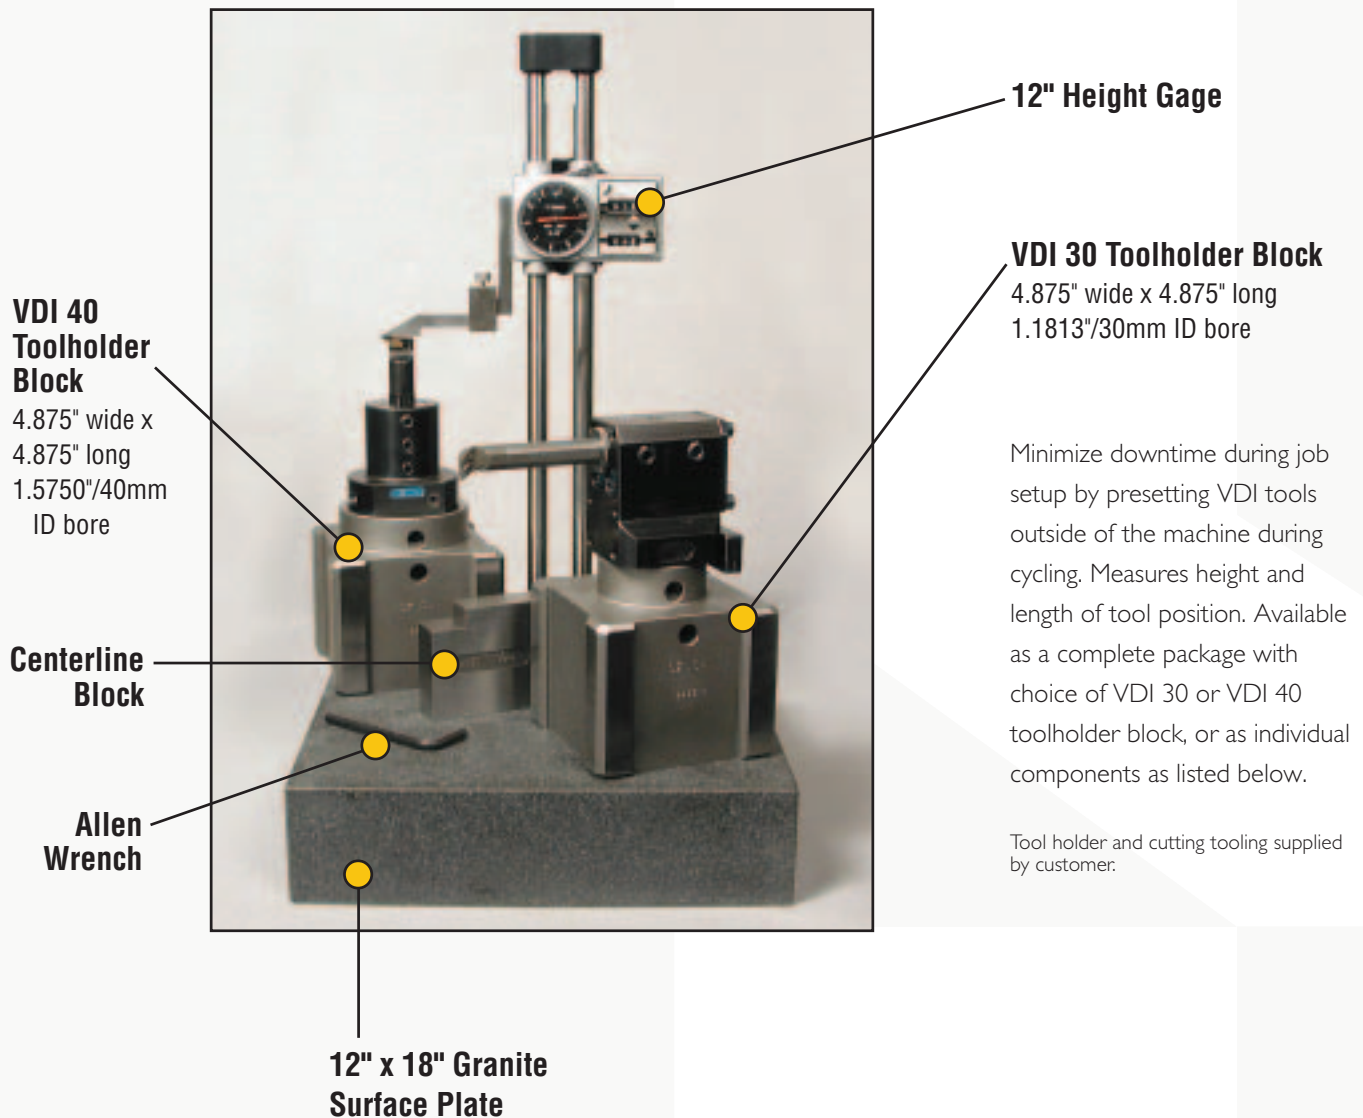

- 12" manual height gage—.001" dial graduation with dual digital counters
- Centerline block for over and under touch off
- 12" x 18" x 3" granite surface plate
- Choice of VDI 30 or 40 toolholder block designed for use with Hardinge VDI 30 or 40 toolholders (DIN 69880 standard)
- Allen wrench—6mm

Designed to increase productivity in job setup. Purchase the complete system or individual components! Economical for individual cell use.

(toolholder and cutting tool not included)
